Poste radicular FiberMaster

Sistema de construcción de fibra de vidrio con y sin cabezal

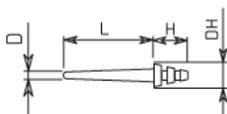

Los postes radiculares del color del diente ofrecen nuevas posibilidades estéticas para los sistemas de construcción con postes radiculares que se cubren con coronas de cerámica integral o con coronas de composite. Los postes translúcidos FiberMaster a diferencia de los postes radiculares metálicos, tienen la ventaja de producir reconstrucciones estéticas de alta calidad. Estos postes están hechos de fibra de vidrio especial, que garantiza una elevada resistencia. La especial elasticidad de los postes absorbe suavemente las fuerzas y las transmite en la raíz del diente, descartando posibles fracturas de las raíces. Los postes FiberMaster son visibles radiográficamente y pueden retirarse con instrumentos rotatorios. Indicaciones: aplicación en todos los dientes parcialmente destruidos, para restauraciones con coronas de cerámica integral, coronas parciales y carillas sin deterioro del color.
